 [Portfolio](#)

Results-driven Full-Stack SDE specializing in building scalable, AI-integrated applications. Experienced in Next, React, Node.js, Express, MongoDB, and cloud deployment on AWS. Proficient with modern dev tools including Git, GitHub, GitLab, and Docker. AI Agent Developer skilled in Python, LangChain, RAG, and workflow automation using n8n. Recognized with 2nd place at the Invento competition for innovative problem-solving. Passionate about delivering production-ready solutions that drive performance and impact.

Experience

●

Full Stack Developer

Aug 2025 - Jan 2026

- Engineered and deployed a new user analytics dashboard using the MERN stack on AWS, providing the product team with real-time insights and contributing to a 10% increase in user engagement metric tracking.
- Collaborated on the core feature development of a Flutter-based mobile app; refactored API integration points to reduce data load times by 30% and improve the app's overall responsiveness.
- Architected and implemented a CI/CD pipeline using GitHub Actions and AWS CodePipeline, which automated the deployment process and reduced manual deployment errors by over 95%.

Education

●

High School

2024

●

Sahyog College, Kavikulguru Kalidas University

2024-2027

- Bachelor of Computer Application – Thane, Maharashtra
- Coursework focuses on programming fundamentals, data structures, database, and web development.
- Actively involved in hackathons, technical events, and project-based learning to strengthen real-world problem-solving skills.

- JavaScript
- TypeScript
- React.js
- Next.js
- Flutter
- Tailwindcss
- Dart

- Bun
- Node.js
- Express.js
- MongoDB
- MySQL
- PostgreSQL
- RestAPI

- Git
- Github
- Gitlab
- Docker
- Vercel
- Netlify
- Railway

- Python
- Langchain
- Rag
- VSCode
- Leadership
- Communication
- Collaboration

Projects

AI-Powered Code Reviewer

- Built an intelligent code review platform using React, Node.js, Express.js, and Tailwind CSS, integrated with Gemini AI API for real-time feedback and code quality analysis.
- AI-generated suggestions to help developers improve structure, readability, and performance.
